octenicare[®] REPAIR CREME
One for all.

NEW

One for all – protection and care for irritated skin.

We have expanded our Octenidine range to include a new product: octenicare® REPAIR CREME. This care and regeneration cream is ideal for a number of uses.

It helps alleviate dry skin, supports wound healing, cares for scars and burns. Provides support when suffering from the results of incontinence, e.g. irritated skin in the genital area, and much more.

octenicare[®] REPAIR CREME

Product characteristics

- cares for irritated, dry and flaky skin
- nourishes epithelising wounds
- protects from moisture and inhibits odour causing pathogens, such as those caused by incontinence
- compatible with octenis^{an}® preventive washing products
- high skin tolerance
- dermatologically tested
- free of fragrance and dyes

protect. heal. care.

Phases of wound healing.

- 1. Phase: Exudation**
octenilin® wound irrigation solution

Cell debris, pathogens and waste materials are washed out; the wound cleans itself.

- 2. Phase: Granulation**
octenilin® wound gel

Connective tissue is formed; capillaries supply the new tissue.

octenicare® REPAIR CREME plays an important role in the care of wounds and actively supports the skin's regeneration process.

3. Phase:
Epithelisation
octenicare®
REPAIR CREME

The wound contracts;
scarring starts.

4. Phase:
Regeneration
octenicare®
REPAIR CREME

The new tissue hardens
and mostly restores
the original structure
of the tissue.

fragile skin

Supports the natural
regeneration of the skin

+ PANTHENOL

promotes the regeneration
of skin, ensuring smoothness
and elasticity.

+ BISABOLOL

has an anti-inflammatory
effect and soothes the skin.

A unique combination formula for maintaining optimal skin integrity particularly for those at an increased risk of skin breakdown.

Care with
octenicare[®]
REPAIR CREME

+ OCTENIDINE

inhibits odour causing
pathogens.

Dry and irritated skin

The skin is the body's protective casing and it differs from human to human. Neurodermatitis, psoriasis and even the weather can dry out and irritate the skin.

Care with **octenicare® REPAIR CREME**:

The affected areas should be treated on a regular basis. **octenicare® REPAIR CREME** can moisturise, calm and promote the regeneration of irritated and dry skin.

Do not use the cream in cases of acute dermatitis.

Burns

Whether it was caused by the sun, heat or fire. Burns can severely damage the skin and affect the deeper layers.

Care with **octenicare® REPAIR CREME**:

Depending on the degree of burn, **octenilin® irrigation solution** should be used to clean the wound followed by the use of **octenilin® wound gel**. As soon as the burning sensation has subsided and the skin is regenerating, **octenicare® REPAIR CREME** can be applied. The cream is particularly skin-friendly and moisturises the skin.

The combination of panthenol & bisabolol protects the skin and supports the regeneration of the skin.

Abrasions and cuts

Abrasions and cuts can also damage deeper layers of the skin and are accompanied by an increased risk of infection.

Care with **octenicare® REPAIR CREME**:

octenicare® REPAIR CREME can be used to support wound healing once the wound has epithelised. The damaged skin areas are protected and skin regeneration is promoted. The nourishing cream can contribute to reducing the appearance of scars.

Do not use **octenicare® REPAIR CREME** on open wounds.

Scar care

Deep cuts, surgery or severe burns can all lead to a scar being left behind after healing. Diligent care can improve the appearance of scars.

Care with **octenicare® REPAIR CREME**:

Using **octenicare® REPAIR CREME** several times a day, supports the regeneration of the scar as well as keeping it smooth and protecting it from external influences.

Incontinence

When the body ages, the functions of the intestines and the bladder weaken. What used to not be problematic is now becoming troublesome, such as controlling the anal sphincter and the bladder. Many people suffer from incontinence as they age, so are in need of skin care that is optimised for use in the genital area, in order to avoid skin problems.

Care with **octenicare® REPAIR CREME**:

Apply **octenicare® REPAIR CREME** to the affected areas. The cream creates a protective barrier on the skin and protects it from outer influences and moisture. The ingredient Octenidine also inhibits the formation of odour causing pathogens, therefore reducing unpleasant odours. Since no fragrances and dyes are used, it is also suited for older and sensitive skin.

Moisture and pressure irritation

In bed-bound people, moisture and pressure can lead to the development of various skin irritations. Long-term pressure on certain areas can cause the development of bedsores. In obese people, problems can develop in areas where sweating skin folds touch each other continuously.

Care with

octenicare® REPAIR CREME:

Apply **octenicare® REPAIR CREME** on the irritated area. The cream forms a protective barrier, protecting the skin from moisture and consequently the irritated skin can regenerate.
