

3 tips for optimal placement

1. Visible

Make sure that the hand rub dispensers are immediately visible in all rooms – this will encourage automatic use.

2. Accessible

Position the dispensers so that they are within your reach during all workflows – always an arm's length away.

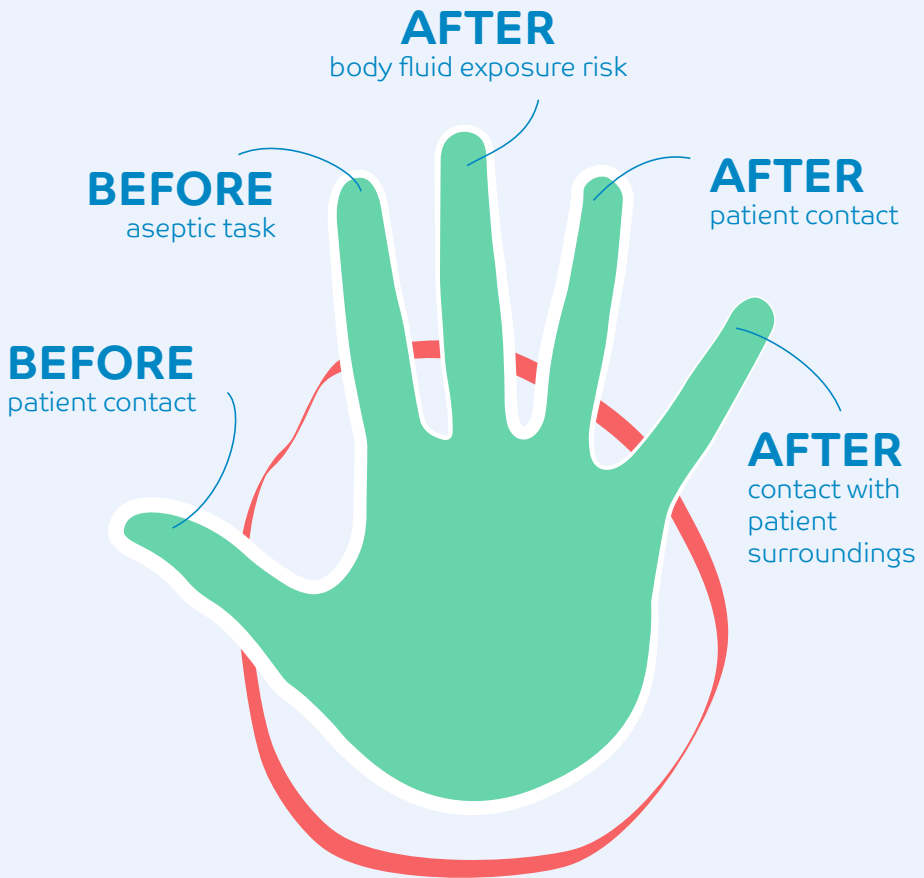

3. Reliable

Ensure that dispensers are reliably located where they are expected to be – as routine enhances safety.

Bonus tip: Flexible holders allow for precise placement of the hand rub dispensers **along the workflows of the medical staff** – for example, at bedside, infusion stand and other equipment.

The 5 moments of hand disinfection

Please ensure that **hand rub dispensers at the Point of Care are always within your reach.** Tips for optimal placement can be found on the reverse side.
