

Going green – We're taking our mission to the next level

Our mission - **to protect lives around the world** - is based on a holistic, sustainable approach. Together, we can make a big difference in protecting people and the environment. Each and every one of us can make a big difference by making small changes in our daily lives.
Together, we can make a difference!

When leaving the (meeting) room, turn off the lights, projector, or TV, and close the windows.

Fill the kettle only as much as you actually need.

After work, turn off electrical appliances and do not leave them running in standby mode overnight.

Set the refrigerators in the kitchens to 8°C.

Set the heating thermostats to frost protection in the evening.

Ventilate office spaces for 3 minutes (winter) to 10 minutes (summer) at a time, using intermittent ventilation rather than continuous ventilation.

Don't let drinking water run unnecessarily.

Set the thermostat correctly (20°C is considered the ideal temperature for office spaces) and dress appropriately for winter.

Clean up your digital space and delete data that is no longer needed.

Print documents only when it is unavoidable - and do not staple them.

For your commute, if possible, use public transportation, carpool or use JobRad.

Don't send unnecessary emails. Only forward attachments when it makes sense, and keep the distribution list small. Emails generate CO₂ - for example, 10g per email, and up to 50g for emails with large attachments
