schülke

For protecting and hydrating acute wounds, skin irritations and minor burns

octenisept® gel

Our Plus

- moistens and protects the acute wound
- promotes a moist wound healing environment
- no burning during application
- gel increases hydration to alleviate itching
- contains octenidine as a preservative, capable of inactivating pathogens in the gel to build a protective barrier against penetrating germs

Application area

octenisept® gel is ideal for acute skin lesions such as cuts, grazes and abrasions. It is also suitable for slight burns and sunburn. The specialised formula of octenisept® gel provides optimal moisture to support a moist wound-healing environment. It forms a protective layer against bacteria, inactivating germs within the gel, while its cooling effect helps relieve acute itching. octenisept® gel is colourless and non-stinging on application.

Product Profile

Tissue tolerability and biocompatibility of octenisept® gel

Non-irritating, non-sensitising, pain-free, without tissue toxicity, no impairment of granulation or epithelialisation. The tolerability of octenidine has been confirmed by clinical experience over many years in addition to clinical studies on chronic wounds.

Instructions for use

Perform hand hygiene before undertaking wound care. Clean the wound and spray with octenisept® wound antiseptic immediately after the injury occurs. Apply a thin layer of wound gel and then cover with a dressing or plaster as required. Apply the wound gel once or twice a day, until the wound has healed up completely.
