

Surface hygiene with mikrozid® universal wipes

Use mikrozid® universal wipes for both cleaning and disinfection

1. Remove visible soil or organic matter before disinfection.

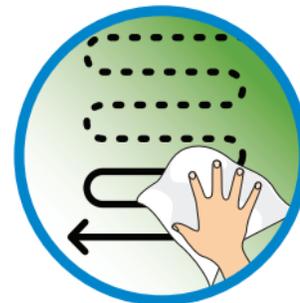

2. Prevent cross-contamination by performing hand hygiene before and after using the wipes.

REMOVE WIPE

CLOSE LID SECURELY

WIPE IN A 'S' SHAPE MOTION

ALLOW SURFACE TO AIR DRY

DISPOSE OF USED WIPES

Cleaning and when indicated, disinfection of frequently touched surfaces is an important and effective step to reduce the spread of infection.

Routine cleaning schedules and frequency of cleaning is applicable to all healthcare settings and should be recommended based on the infection risk level.

mikrozid® universal wipes have been dermatologically tested and can be used without gloves.
